Lesson 03 Demo 05

Implementing EKS Security and Network Policies

Objective: To demonstrate the process of creating AWS network and security policies on an EKS cluster

Tools required: AWS Management Console

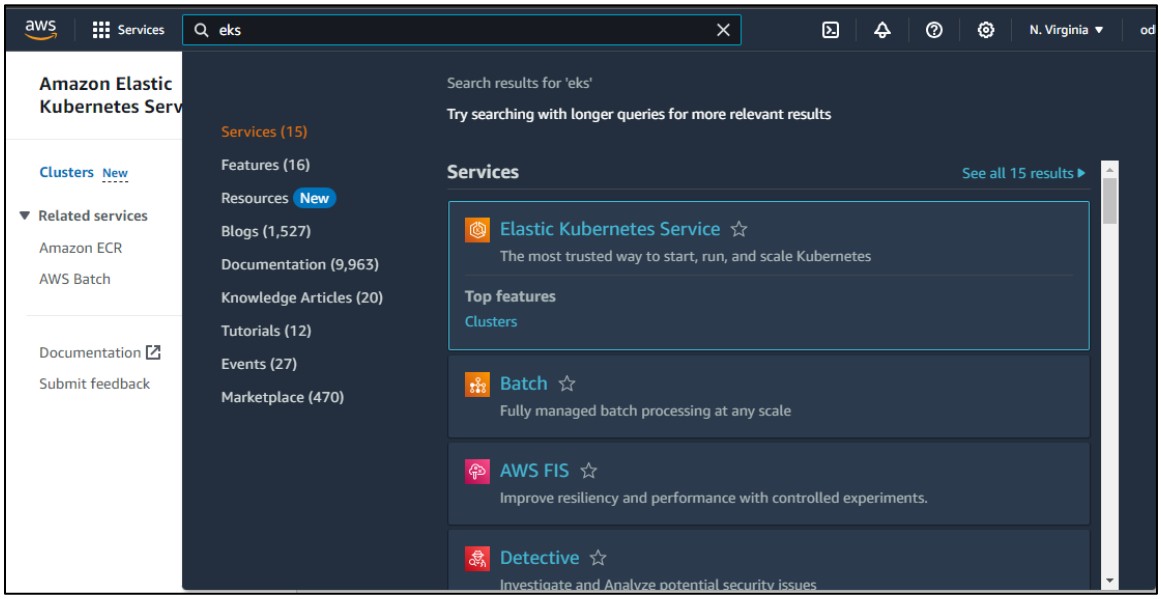
Prerequisites: Lesson 06 Demo 04

Steps to be followed:

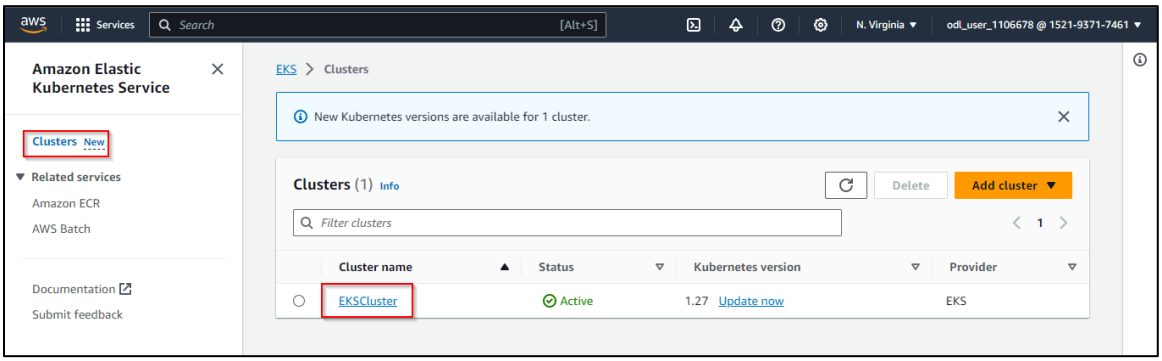
1. Create AWS network and security policies on EKS cluster

Step 1: Create AWS network and security policies on EKS cluster

1.1 Navigate to the AWS Management Console and search for **Elastic Kubernetes Service**

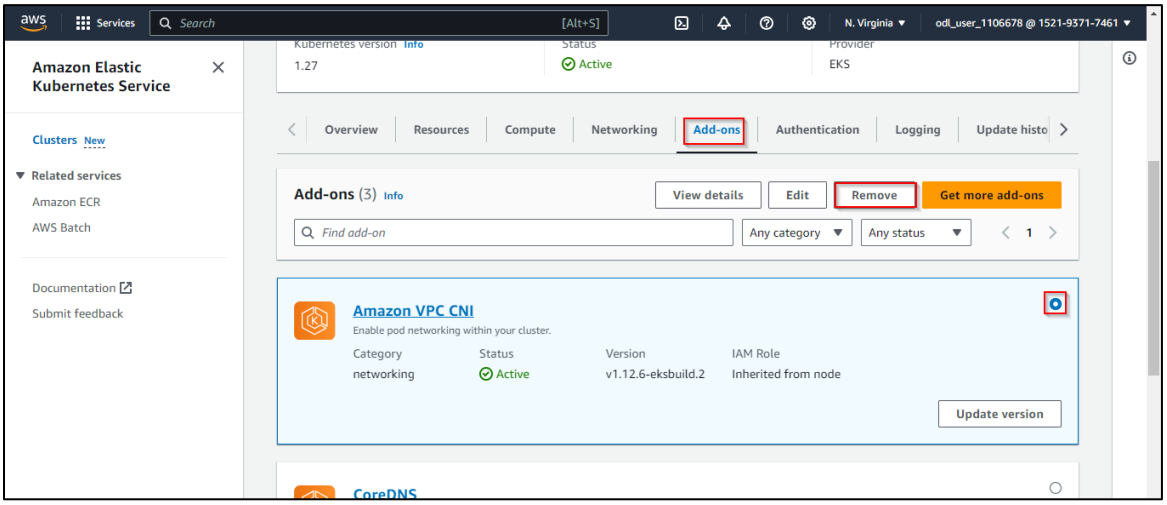


1.2 Click on **Clusters**, and select the cluster **EKSCluster**

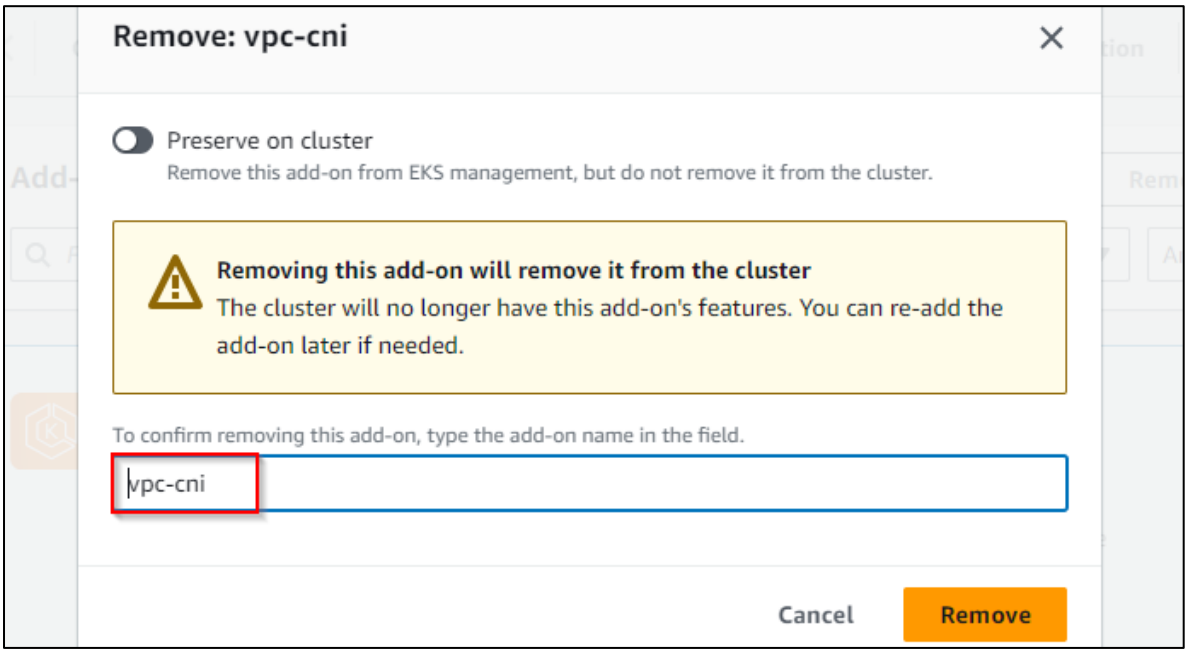


Note: The cluster named **EKSCluster** has already been created in previous demos.

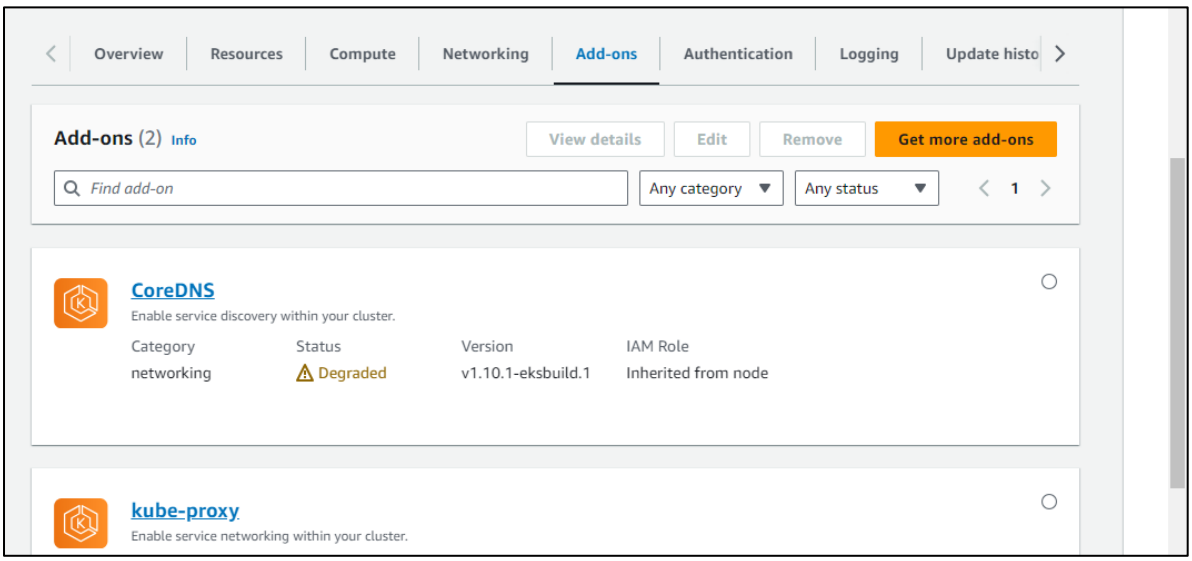
1.3 Under **Add-ons**, select **Amazon VPC CNI**, and then click **Remove**



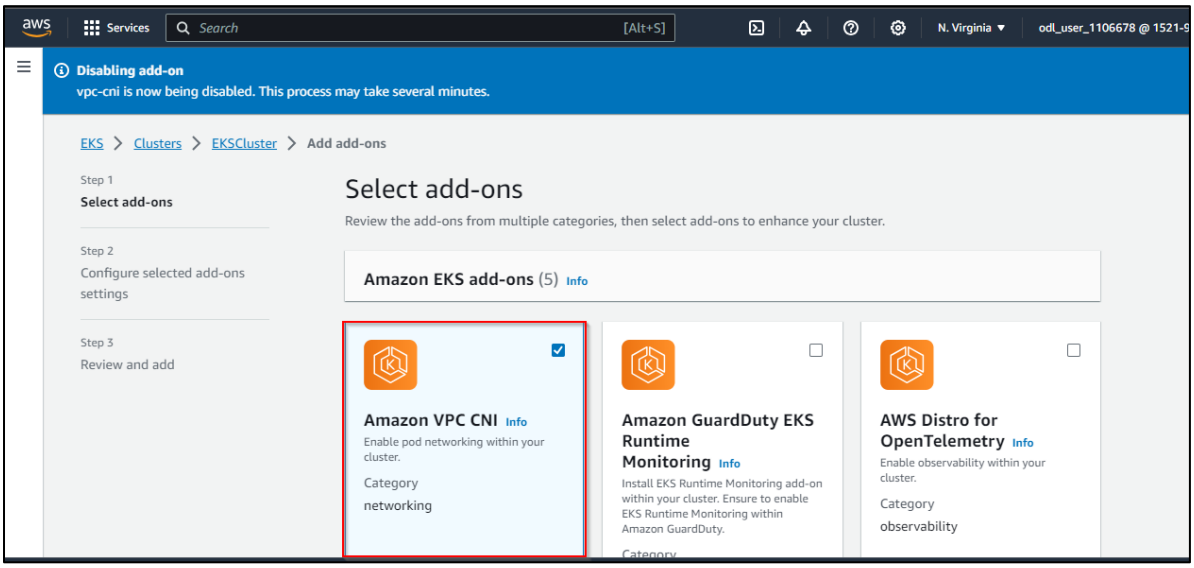
1.4 Confirm the removal by entering **vpc-cni** and clicking the **Remove** button

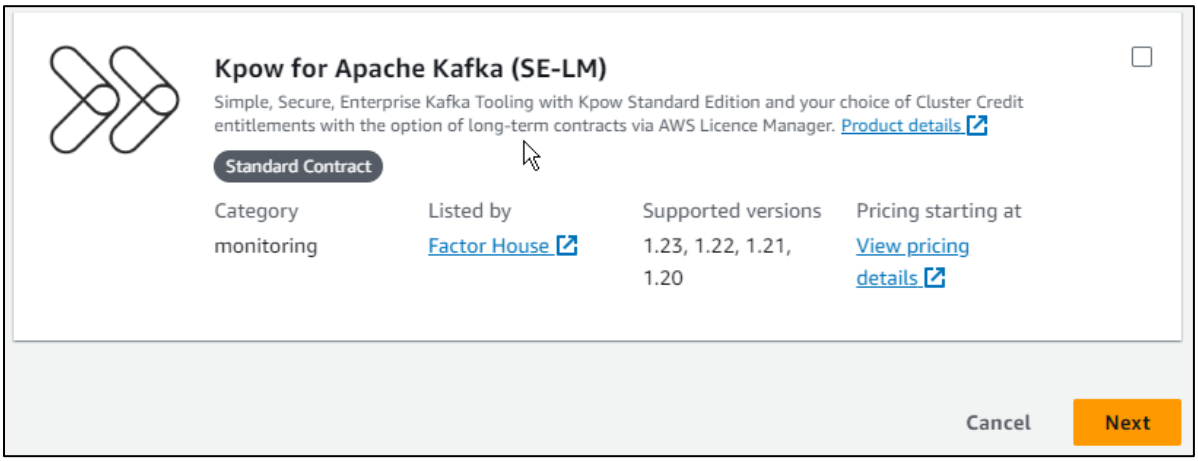


1.5 Click on the **Get more add-ons** button



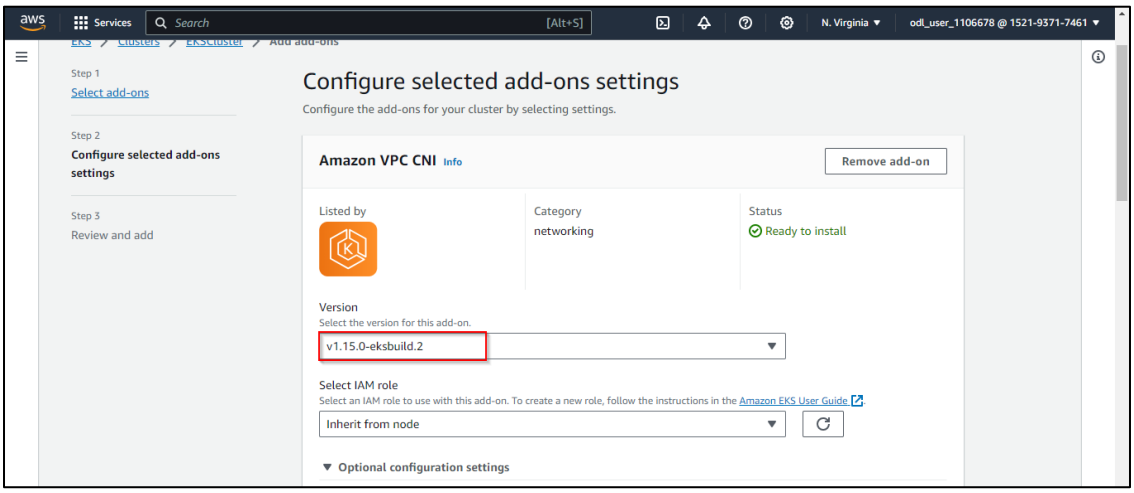
1.6 Select **Amazon VPC CNI** and click on the **Next** button

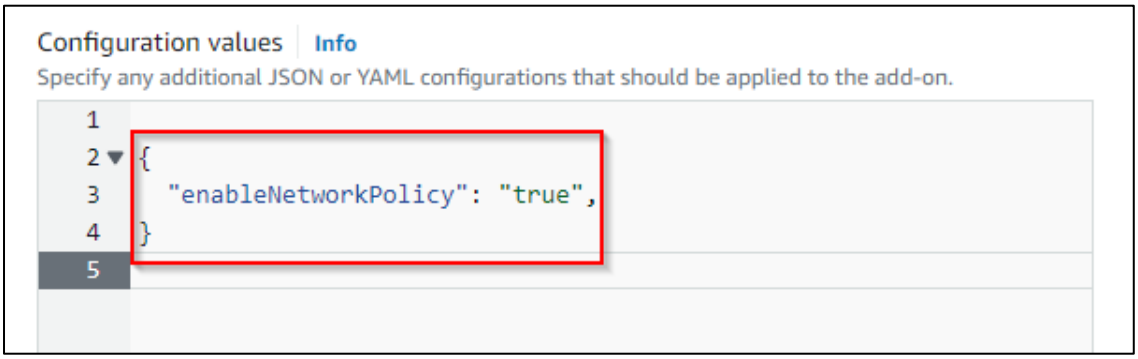


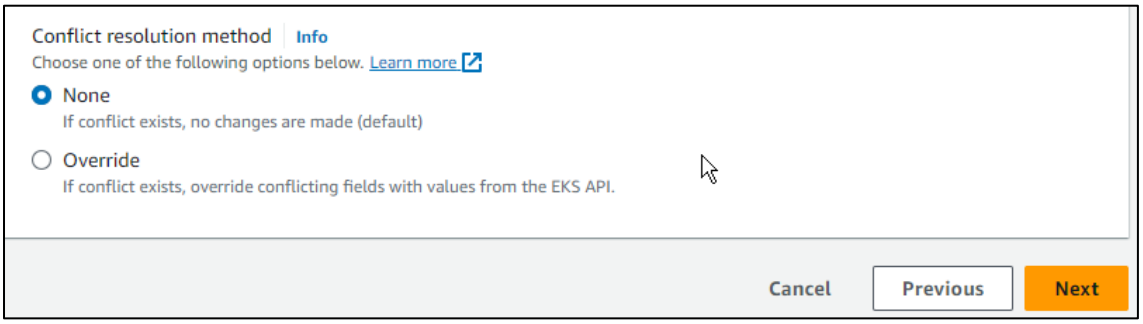


1.7 Choose the latest version of eksbuild and under the **Configuration values** section, enter the following code:

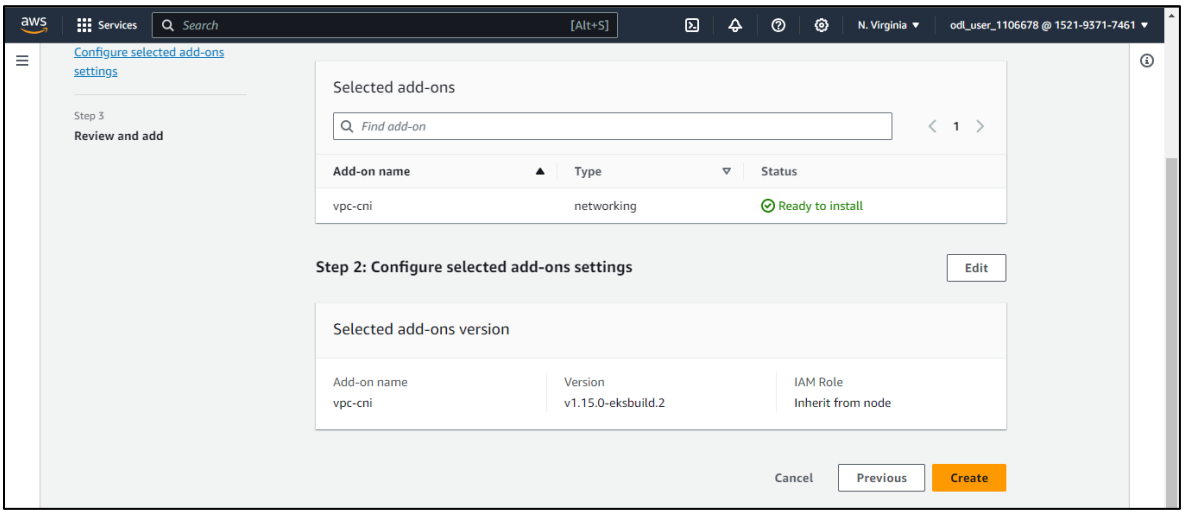
```
{
 "enableNetworkPolicy": "true",
}
```

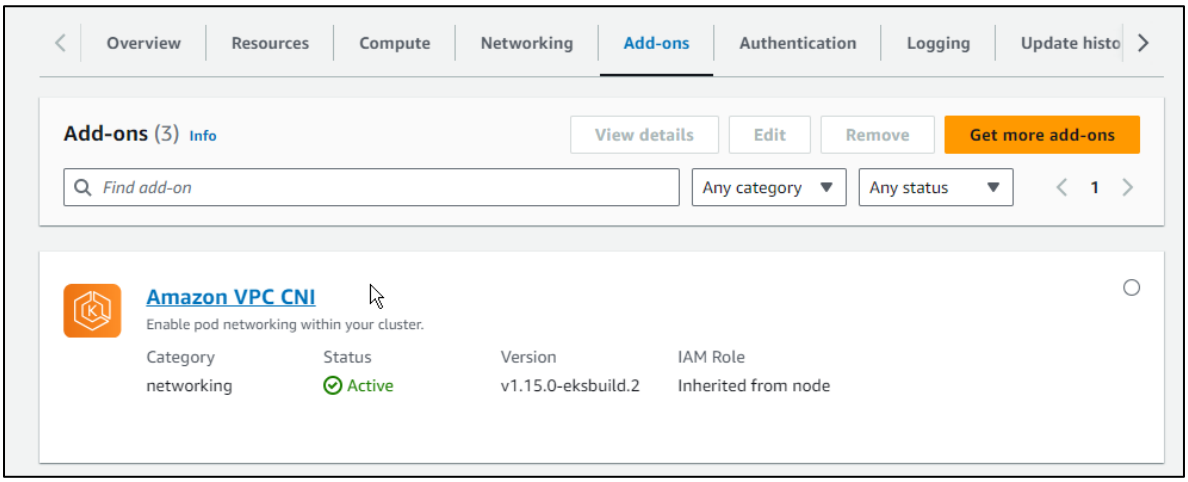




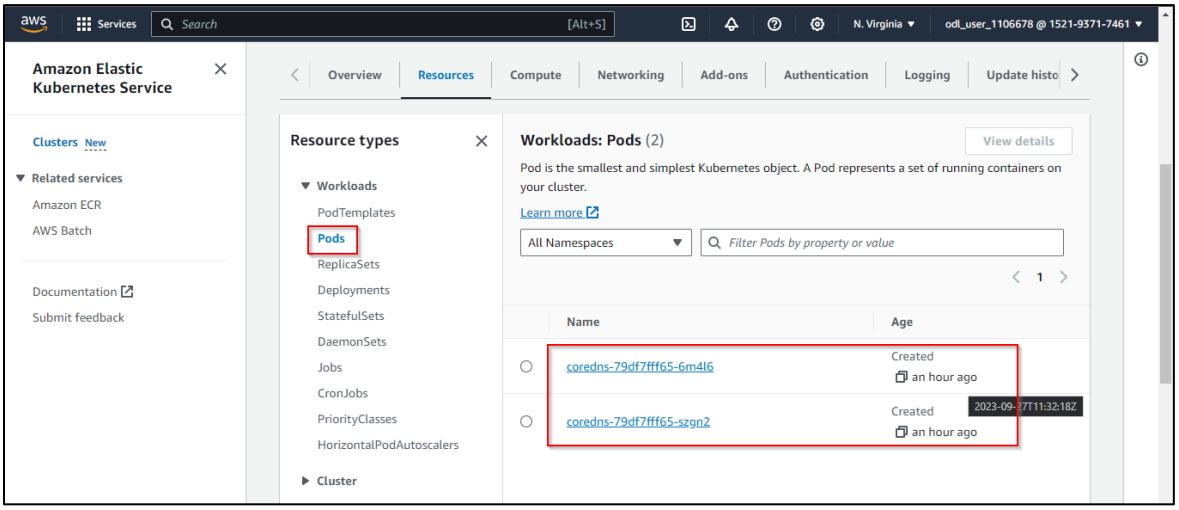


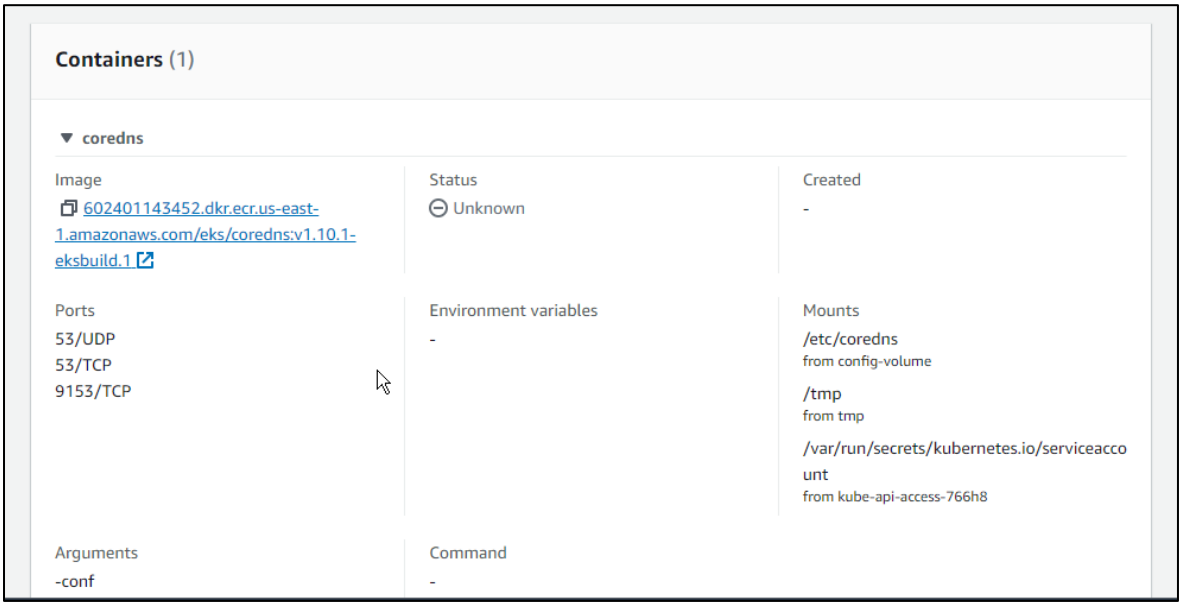
1.8 Click **Create**





Once the VPC CNI add-on is active, you can see pods running in Kube-system namespace.





By following these steps, you have successfully enabled the network policies and configured the Amazon VPC CNI add-on to enhance security and network management within your EKS cluster.
