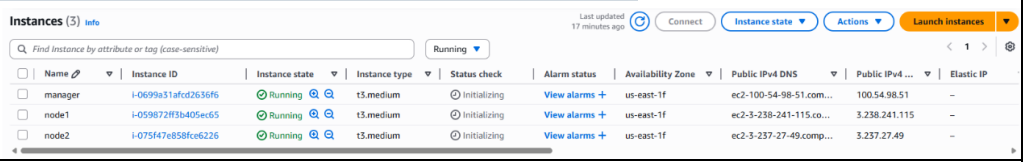
Project Name: Docker Swarm- Voting application

<table>
<tr><td>Objective</td><td>To deploy a scalable, multi-service voting application on a manager node, ensuring efficient orchestration, fault tolerance, and seamless monitoring through Docker visualizer</td></tr>
<tr><td>Problem Statement and Motivation</td><td>John, a DevOps engineer, is tasked with deploying a voting application through multiple microservices. By creating a Docker compose file and deploying it on a manager node in a distributed system, they ensure that each service is efficiently orchestrated and fault-tolerant.

To monitor the deployment, John integrates Docker visualizer as a microservice, providing real-time insights. This setup simplifies the deployment process, enhances scalability, and ensures the application runs smoothly in a production environment.</td></tr>
<tr><td>Create EC2 instances</td><td>
<table>
<tr><th>node</th><th>public-ip</th><th>private-ip</th></tr>
<tr><td>master</td><td>100.54.98.51</td><td>172.31.70.132</td></tr>
<tr><td>ndoe1</td><td>3.238.241.115</td><td>172.31.72.215</td></tr>
<tr><td>node2</td><td>3.237.27.49</td><td>172.31.75.77</td></tr>
</table>



</td></tr>
<tr><td>Install docker on all 3 instances</td><td>sudo su
apt update -y
apt install docker.io -y</td></tr>
<tr><td>Install docker swarm on master node</td><td># master: 100.54.98.51
docker swarm init --advertise-addr 172.31.70.132

#note down node join command</td></tr>
<tr><td>join node1 and node2 in swarm cluster</td><td>#node join command
docker swarm join --token SWMTKN-1-1s3jiuk6saa2ps6h5602zdz2gko6sfgusm2nx7n2d4jq9aftt6-0zjceti04fntt7j3dwft5pmzx 172.31.70.132:2377</td></tr>
<tr><td>overview of voting website</td><td>• Home page with 4 political party buttons
• Vote page that saves the vote in a free MySQL database
• Results page to see totals</td></tr>
</table>

	• Uses PHP + MySQL (works on free hosting like InfinityFree, 000webhost, or Hostinger free plans)
Structure:	voting-app/ ├── Dockerfile ├── index.php ├── vote.php ├── results.php └── db.php
Dockerfile	FROM php:8.2-apache RUN apt update -y RUN apt install git -y RUN git clone https://github.com/pradeepviswa/voting-app.git /var/www/html RUN ls /var/www/html RUN docker-php-ext-install mysqli #check mysqli RUN php -i | grep mysqli
Build Docker Image	docker build -t voting-image .
Create Overlay Network	docker network create \ --driver overlay \ voting-network
Check new network	docker network ls root@ip-172-31-40-230:/home/ubuntu# docker network ls NETWORK ID NAME DRIVER SCOPE bb9bb550470b bridge bridge local 9370616e072c docker_gwbridge bridge local 0d547bd63236 host host local 6zlua77e2ae8 ingress overlay swarm d9a8fede5bdd none null local k714jart0cs4 voting-network overlay swarm
Create MySQL Service	docker service create \ --name voting-mysql \ --network voting-network \ -e MYSQL_ROOT_PASSWORD=root \ -e MYSQL_DATABASE=voting_db \ mysql:8 root@ip-172-31-40-230:/home/ubuntu# docker service create \ --name voting-mysql \ --network voting-network \ -e MYSQL_ROOT_PASSWORD=root \ -e MYSQL_DATABASE=voting_db \ mysql:8 c3dyn923bzxahxt5b8xx0mexm overall progress: 1 out of 1 tasks 1/1: running [==========>] verify: Service c3dyn923bzxahxt5b8xx0mexm converged
Create Web Service	docker service create \ --name voting-web \ --network voting-network \ -p 8080:80 \ voting-image

```
root@ip-172-31-40-230:/home/ubuntu# docker service create \
> --name voting-web \
> --network voting-network \
> -p 8080:80 \
> voting-image
image voting-image:latest could not be accessed on a registry to record
its digest. Each node will access voting-image:latest independently,
possibly leading to different nodes running different
versions of the image.

oxql4oz6bow530h5uc55yb6mv
overall progress: 1 out of 1 tasks
1/1: running   [==================================================>]
verify: Service oxql4oz6bow530h5uc55yb6mv converged
```

Check service:

docker service ls

```
root@ip-172-31-40-230:/home/ubuntu# docker service ls
ID             NAME           MODE         REPLICAS   IMAGE                PORTS
c3dyn923bzxa   voting-mysql   replicated   1/1        mysql:8
oxql4oz6bow5   voting-web     replicated   1/1        voting-image:latest  *:8080->80/tcp
```

Database Connection

My db.php uses the service name as hostname:
$host = "voting-mysql";
Swarm DNS automatically resolves the service.

Enter MySQL Service to Create Table

get container ID: docker ps
Connect mysql: docker exec -it <mysql_container_id> mysql -u root -p
#password is root
Create table:

```
USE voting_db;

CREATE TABLE votes (
id INT AUTO_INCREMENT PRIMARY KEY,
party VARCHAR(50)
);
```

```
root@ip-172-31-42-42:/home/ubuntu# docker ps
CONTAINER ID   IMAGE     COMMAND                  CREATED         STATUS         PORTS                    NAMES
a226f6e86b27   mysql:8   "docker-entrypoint.s…"   4 minutes ago   Up 4 minutes   3306/tcp, 33060/tcp      voting-mysql.1.qsjoesj1r04l74gpiwrs37hv6
root@ip-172-31-42-42:/home/ubuntu# docker exec -it a226f6e86b27 mysql -u root -p root
Enter password:
ERROR 1049 (42000): Unknown database 'root'
root@ip-172-31-42-42:/home/ubuntu# docker exec -it a226f6e86b27 mysql -u root -p
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 9

mysql> USE voting_db;
CREATE TABLE votes (
id INT AUTO_INCREMENT PRIMARY KEY,
party VARCHAR(50)
);
Database changed
mysql>
mysql> CREATE TABLE votes (
    -> id INT AUTO_INCREMENT PRIMARY KEY,
    -> party VARCHAR(50)
    -> );
Query OK, 0 rows affected (0.04 sec)
```

Scale the Web Service (Swarm advantage)

docker service scale voting-web=3

```
root@ip-172-31-40-230:/home/ubuntu# docker service scale voting-web=3
voting-web scaled to 3
overall progress: 3 out of 3 tasks
1/3: running   [==================================================>]
2/3: running   [==================================================>]
3/3: running   [==================================================>]
verify: Service voting-web converged
root@ip-172-31-40-230:/home/ubuntu# docker service ps voting-web
ID             NAME            IMAGE                NODE                DESIRED STATE   CURRENT STATE            ERROR                              PORT
