

Lesson 03 Demo 02

Configuring AWS Security Hub

Objective: To configure AWS security hub for continuous security monitoring and compliance assessment across AWS accounts and resources

Tools required: AWS Console

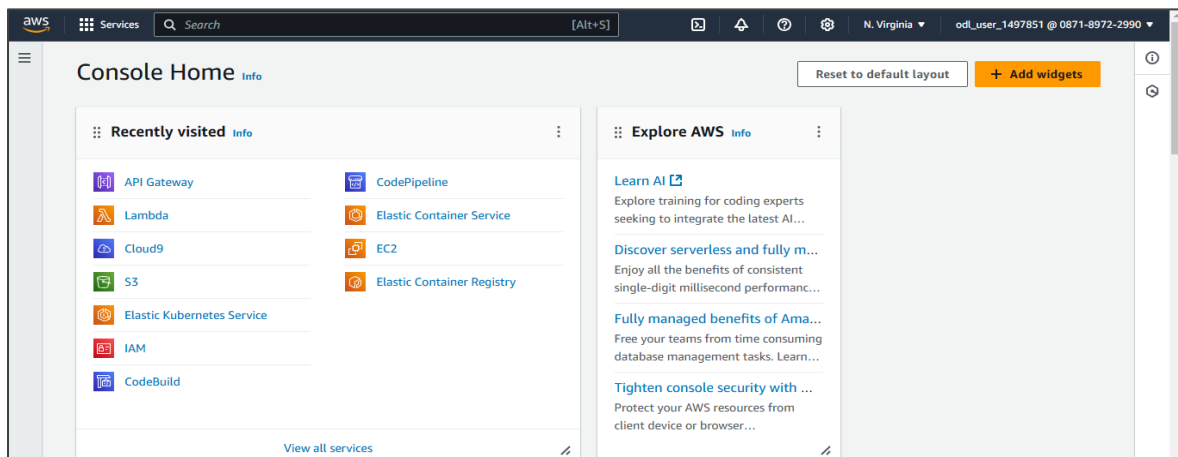

Prerequisites: None

Steps to be followed:

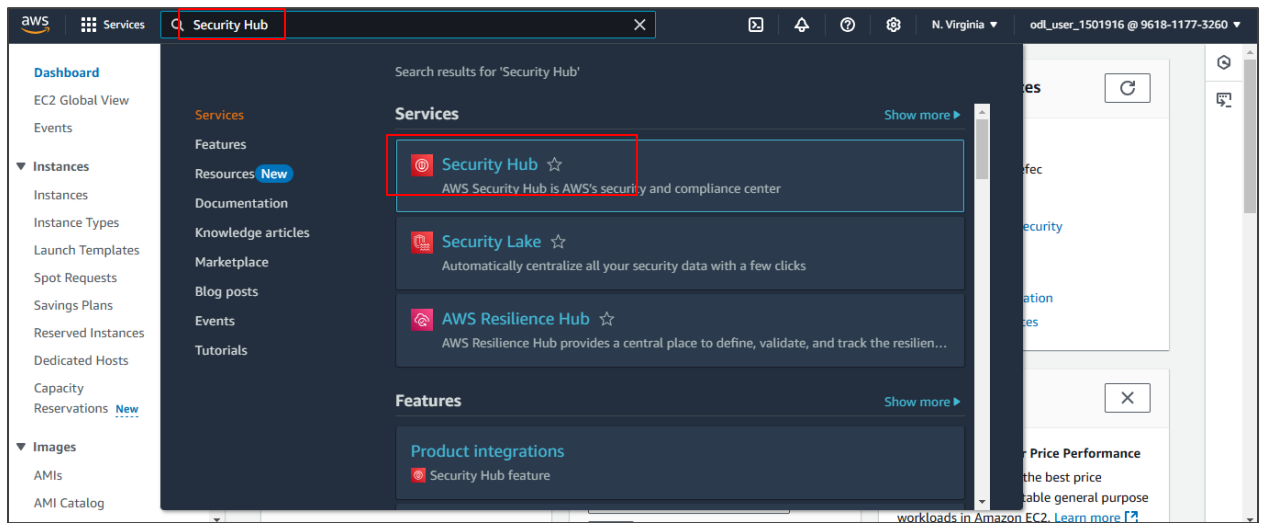

1. Enable security hub

Step 1: Enable security hub

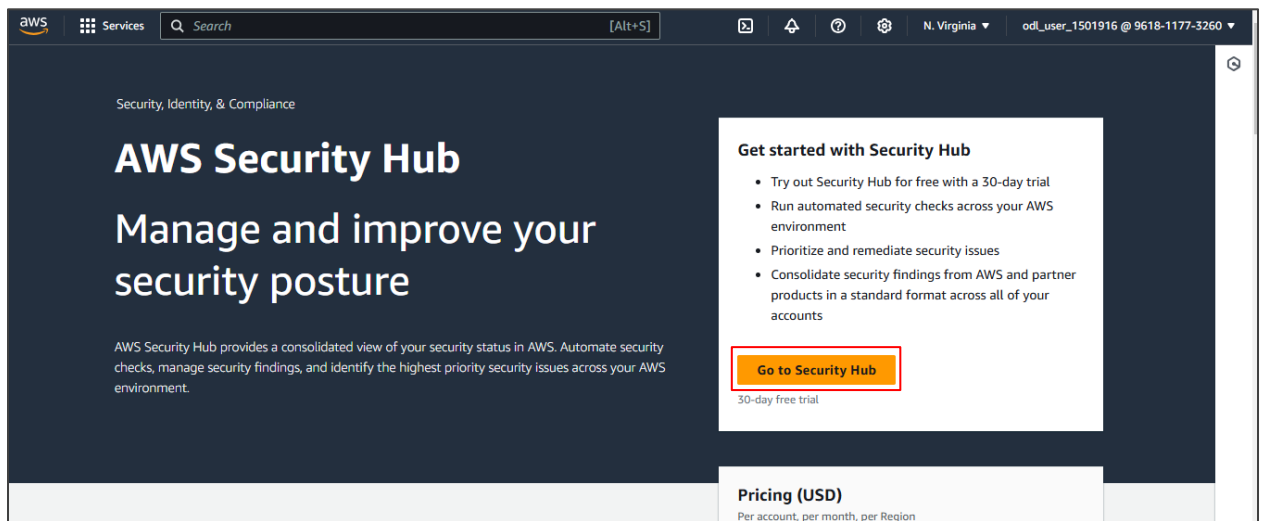

- 1.1 Open the **AWS Management Console** in your practice environment

1.2 In the search bar, type **Security Hub** and select the **Security Hub** service

1.3 Click on **Go to Security Hub**

1.4 Enable the required Security standards

Security standards

Enabling AWS Security Hub grants it permissions to conduct security checks. [Service Linked Roles \(SLRs\)](#) with the following services are used to conduct security checks: Amazon CloudWatch, Amazon SNS, AWS Config, and AWS CloudTrail.

☒ Enable AWS Foundational Security Best Practices v1.0.0
☒ Enable AWS Resource Tagging Standard v1.0.0
☒ Enable CIS AWS Foundations Benchmark v1.2.0
☐ Enable CIS AWS Foundations Benchmark v1.4.0
☐ Enable CIS AWS Foundations Benchmark v3.0.0
☒ Enable NIST Special Publication 800-53 Revision 5
☒ Enable PCI DSS v3.2.1

AWS Integrations

Enabling Security Hub grants it permissions to import findings from AWS services that you have enabled.

CancelEnable Security Hub

1.6 Scroll down and click **Next** to proceed

1.7 Select **Findings** from the **Security Hub** left panel to review findings management

You can see a list of security findings in AWS Security Hub with details such as **Finding**, **Severity**, **Workflow status**, **Region**, **Account ID**, and **Product**.

The screenshot displays the AWS Security Hub console. On the left is a navigation sidebar with sections for 'Summary', 'Controls', 'Security standards', 'Insights', and 'Integrations'. Under 'Insights', 'Findings' is selected. Below this are 'Management' (Automations, Custom actions) and 'Settings' (General) sections. The main content area is titled 'Findings (15)' and includes a 'Notifications' bar at the top with counts for various notification types. Below the title is a descriptive text: 'A finding is a security issue or failed security check. You can save related findings by selecting the 'Group by' and then creating an insight.' There are buttons for 'Actions', 'Workflow status', 'Insight details', and 'Create insight'. A search bar labeled 'Add filter' is present, along with a 'Group by' dropdown menu set to 'None'. Three active filters are shown: 'Workflow status is NEW', 'Workflow status is NOTIFIED', and 'Record state is ACTIVE'. A 'Clear filters' button is also available. Below the filters is a table of findings, with the first two rows highlighted by a red border. The table has columns for 'Finding', 'Severity', 'Workflow status', 'Region', 'Account ID', and 'Product'.

	Finding	Severity	Workflow status	Region	Account ID	Product
☐	AWS Config should be enabled and use the service-linked role for resource recording	MEDIUM	NEW	us-east-1	961811773260	Security Hub
☐	A log metric filter and alarm should exist for usage of the	LOW	NEW	us-east-1	961811773260	Security Hub

By following these steps, you have successfully configured the AWS security hub, which enables continuous security monitoring and compliance checks to help detect and manage security findings across the AWS environment.
