

Lesson 03 Demo 03

Creating an IAM User and Attaching Permissions

Objective: To create an IAM user in AWS and assign necessary permissions using the AWS Management Console

Tools required: AWS Console

Prerequisites: None

Steps to be followed:

1. Create an IAM user and attach a policy

Step 1: Create an IAM user and attach a policy

1.1 Open the **AWS Management Console** in your practice environment

1.2 In the search bar, type **IAM** and select the IAM service

1.3 Click on **Users** in the left navigation panel

1.4 Provide a name for the user and check the box labeled **AWS Management Console Access** to enable console access

Step 1: Specify user details

Step 2: Set permissions

Step 3: Review and create

Step 4: Retrieve password

Specify user details

User details

User name

iam_user

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

☒ **Provide user access to the AWS Management Console - optional**
If you're providing console access to a person, it's a [best practice](#) to manage their access in IAM Identity Center.

Console password

☐ Autogenerated password
You can view the password after you create the user.

☒ Custom password
Enter a custom password for the user.

1.5 Set a **Custom password** for the user in the corresponding field

Step 1: Specify user details

Step 2: Set permissions

Step 3: Review and create

Step 4: Retrieve password

Specify user details

User details

User name

iam_user

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

☒ **Provide user access to the AWS Management Console - optional**
If you're providing console access to a person, it's a [best practice](#) to manage their access in IAM Identity Center.

Console password

☐ Autogenerated password
You can view the password after you create the user.

☒ Custom password
Enter a custom password for the user.

1.6 Scroll down and click on **Next** to proceed

IAM > Users > Create user

Console password

☐ Autogenerated password
You can view the password after you create the user.

☒ Custom password
Enter a custom password for the user.

- Must be at least 8 characters long
- Must include at least three of the following mix of character types: uppercase letters (A-Z), lowercase letters (a-z), numbers (0-9), and symbols ! @ # \$ % ^ & * () _ + - (hyphen) = [] { } ' "

☐ Show password

☐ Users must create a new password at next sign-in - Recommended
Users automatically get the [IAMUserChangePassword](#) policy to allow them to change their own password.

Info If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. [Learn more](#)

Cancel **Next**

1.7 On the **Permissions** page, select **Add user to group** and then click on **Create group**

IAM > Users > Create user

Step 1: Specify user details
Step 2: **Set permissions**
Step 3: Review and create
Step 4: Retrieve password

Set permissions
Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. [Learn more](#)

Permissions options

- ☒ **Add user to group**
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
- ☐ Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.
- ☐ Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

User groups (2)

Search

☐	Group name	Users	Attached policies	Created
☐	Admins	0	-	2024-06-06 (5 months ago)

Create group

1.8 Enter a name for the user group in the **Group Name** field and click **Create user group** to save it

1.9 Select **Attach policies directly** from the available options

- 1.10 In the **Permission policies** search bar, type **EC2**, and select **AmazonEC2FullAccess** from the list of policies

- 1.11 Scroll down and click **Next** to review the settings

1.12 On the final review page, click on **Create user** to complete the process

Permissions summary

Name	Type	Used as
AmazonEC2FullAccess	AWS managed	Permissions policy
IAMUserChangePassword	AWS managed	Permissions policy

Tags - optional

Tags are key-value pairs you can add to AWS resources to help identify, organize, or search for resources. Choose any tags you want to associate with this user.

No tags associated with the resource.

[Add new tag](#)

You can add up to 50 more tags.

[Cancel](#) [Previous](#) [Create user](#)

The user and user group are created, and the necessary permissions are assigned.

iam_user user created with a few errors. See error description below. [View user](#)

Step 1: [Specify user details](#) (highlighted)

Step 2: Set permissions

Step 3: Review and create

Step 4: [Retrieve password](#) (selected)

Retrieve password

You can view and download the user's password below or email users instructions for signing in to the AWS Management Console. This is the only time you can view and download this password.

[Email sign-in instructions](#)

Console sign-in details

Console sign-in URL
<https://730335582767.signin.aws.amazon.com/console>

User name
[iam_user](#)

Console password
***** [Show](#)

[Cancel](#) [Download .csv file](#) [Return to users list](#)

By following these steps, you have successfully created an IAM user, added the user to a group, and attached the **AmazonEC2FullAccess** policy, ensuring the user has the required permissions to manage EC2 resources.
