

Lesson 03 Demo 02

Creating Microsoft Entra Join

Objective: To create Microsoft Entra Join for joining different users on cloud

Tools required: Azure account with administrator access

Prerequisites: None

Steps to be followed:

1. Create a Microsoft Entra ID join
2. Create a virtual machine
3. Connect RDP (Remote Desktop Protocol) to the virtual machine to join the machine to the Microsoft Entra ID domain

Step 1: Create a Microsoft Entra ID join

1.1 Log in to the Azure portal, search **Microsoft Entra ID** and select

1.2 In the **Overview** page, click on **Devices** under the **Manage** section

1.3 In the **Devices | Overview** page, click on **Device Settings** under the **Manage** section

1.4 Select the options as specified below and click on **Save** to save the changes:

Users may join devices to Microsoft Entra: Set this option to **All** or **Selected** based on the scope of deployment and whom you want to allow setting up a Microsoft Entra ID joined device.

Require Multifactor Authentication (MFA) to register or join devices with Microsoft Entra: Select **Yes** if you require users to perform MFA while joining devices to Microsoft Entra ID. For users joining devices to Microsoft Entra ID using MFA, the device becomes a 2nd factor.

The following screen appears after successfully updating the device settings:

Step 2: Create a virtual machine

2.1 On the Microsoft Azure home page, click on **Create a resource**

2.2 Click on **Create** to create a **Virtual machine**

2.3 Now, create a Windows 10 VM on Azure (treat this machine as one of the user desktops or laptops that wants to join the machine with the Microsoft Entra ID domain). In the **Create a virtual machine** page, enter the details as shown below:

Microsoft Azure

Search resources, services, and docs (G+)

Home > Create a resource >

Inbound port rules

Select which virtual machine network ports are accessible from the public internet. You can specify more limited or granular network access on the Networking tab.

Public inbound ports * ☐ None ☒ Allow selected ports

Select inbound ports *

All traffic from the internet will be blocked by default. You will be able to change inbound port rules in the VM > Networking page.

Licensing

☒ I confirm I have an eligible Windows 10/11 license with multi-tenant hosting rights. *

After successful deployment, the following screen will appear:

Step 3: Connect RDP (Remote Desktop Protocol) to the virtual machine to join the machine to the Microsoft Entra ID domain

3.1 Establish an RDP connection to the VM to join this machine to the Microsoft Entra ID domain. Now, click on **Go to resource**.

3.2 Click on **Connect** under the **Settings** section

3.3 On the **Connect** page, click on **Select** under **Native RDP**

3.4 On the **Native RDP** page, click on **Download RDP file**

3.5 To run the file, click on the downloaded file (**Win10.rdp**)

3.6 Click **Connect**

3.7 Enter the user credentials and click on the **OK** button

3.8 In the RDP session, go to **Settings** and click on **Accounts**

3.9 Click on **Access work or school** under the **Accounts** section

3.10 Click **Connect**

3.11 Click **Join this device to Microsoft Entra ID**

3.12 Provide the credentials of the user as shown in the screenshots below:
