

Lesson 04 Demo 01

Implementing Microsoft Entra ID Protection

Objective: To demonstrate Microsoft Entra ID features for protection and showcase its capabilities in safeguarding sensitive data

Tools required: Azure account with administrator access

Prerequisites: None

Steps to be followed:

1. Deploy a virtual machine using an Azure resource manager template
2. Implement Microsoft Entra ID Protection
3. Validate the Microsoft Entra ID Protection configuration by simulating risk events

Step 1: Deploy a virtual machine using an Azure resource manager template

1.1 Log in to the Azure portal and select **Create a resource**

1.2 In the **Marketplace** page, search for and select **Template deployment (deploy using custom templates)**

1.3 In the **Custom deployment** page, click on **Build your own template in the editor**

1.4 Navigate to <https://github.com/Simplilearn-Edu/AZ-305> and click **Download ZIP**

1.5 Navigate back to the Azure portal and click on **Load file** in the **Edit template** page

1.6 Select the **4.02_azuredeploy.json** file

The file has been uploaded successfully:

1.7 Click Save

1.8 In the Custom deployment page, click on Edit parameters

1.9 Click on Load file

1.10 Select the 4.02_azuredeploy.parameter.json file

1.11 Click Save

1.12 In the Custom deployment page, click on Create new to create a new Resource group (RG01) under Project details

1.13 Under **Instance details**, click on **Change size** under **Vm Size**

1.14 In the **Select a VM size** page, select **D2s_v3** and click **Select**

1.15 Under **Instance details**, provide the information as shown below:

Instance details

Region * ⓘ

East US

Vm Size * ⓘ

1x Standard D2s v3

2 vcpus, 8 GB memory

Change size

Vm Name ⓘ

az1010401b-vm1

Admin Username * ⓘ

Student

Admin Password * ⓘ

.....

Virtual Network Name ⓘ

1.17 Click on **Create**

The following output screen appears:

Step 2: Implement Microsoft Entra ID Protection

2.1 In the Microsoft Azure portal, search for and select Microsoft Entra ID Protection

2.2 In the Identity Protection page, select User risk policy under the Protect section

2.3 In the **User risk policy** page, click on **Block access** under **Controls**

2.4 In the **Access** page, make the changes as shown in the screenshot below and click **Done**

2.5 Change Policy enforcement to Enabled and click Save

The following screen appears:

2.6 Click on **Sign-in risk policy** under the **Protect** section

2.7 In the **Sign-in risk policy** page, click on **Low and above** under **Sign-in risk**

2.8 In the **Sign-in risk** page, make the change as shown in the screenshot below and click **Done**

2.9 Click on **Block access** under **Controls**

2.10 In the **Access** page, make the changes as shown in the screenshot below and click **Done**

2.11 Change **Policy enforcement** to **Enabled** and click **Save**

The following screen appears:

Step 3: Validate the Microsoft Entra ID Protection configuration by simulating risk events

3.1 Navigate back to the **Microsoft Azure** home page and click on **Virtual machines**

3.2 In the **Virtual machines** page, click on the virtual machine (**az1010401b-vm1**) that was created in step 1.15

3.3 On the **az1010401b-vm1** page, click on **Connect** under the **Connect** section

3.4 On the **Connect** page, click on **Select** under **Native RDP**

3.5 On the **Native RDP** page, scroll and click on **Download RDP file**

- 3.6 When you click the downloaded file, the following screen will appear:
Now, click **Connect**.

- 3.7 Enter the **Admin Username (Student)** and **Admin Password** that was copied in step 1.15

3.8 Click Yes

3.9 When the **Remote Desktop Protocol (RDP)** session opens, the **Server Manager Dashboard** appears. Now, click on **Local Server**.

3.10 On the **Local Server** page, select **On** under **IE Enhanced Security Configuration**

3.11 Click **Off** for both **Administrators** and **Users** and click **OK**

3.12 Open the Internet Explorer and enter this link:

<https://www.torproject.org/projects/torbrowser.html.en>

3.13 Click on **Tor Project | Download**

3.14 Click on **Download for Windows** and select **Install**

3.15 After installation, the following page will appear:
Now, click on **Connect**.

3.16 Enter this link: <https://myapps.microsoft.com>

3.17 Click on **Sign in to your account** – myapps.microsoft.com

3.18 Sign in with your credentials and click **Next**

3.19 After entering the password, click **Sign in**

The following screen appears with the message:

Your sign-in was successful but you don't have permission to access this resource.

This is expected since this account is not configured with multi-factor authentication, which is required due to the increased sign-in risk associated with the use of the ToR browser.

By following these steps, you have successfully demonstrated Microsoft Entra ID features for protection and showcase its capabilities in safeguarding sensitive data.
