

Lesson 08 Demo 01

Managing Azure Storage

Objective: To manage Azure storage to secure and maintain data effectively within Microsoft's cloud storage services

Tools Required: Azure account with administrator access

Prerequisites: None

Steps to be followed:

1. Create a storage account
2. Manage blob storage
3. Create and configure Azure file share
4. Manage network access for Azure storage

Step 1: Create a storage account

1.1 In the Azure portal, search for and select **Storage accounts**

1.2 Click + Create on the Storage accounts page

1.3 On the Basics tab, navigate to Project details and fill in the necessary information

1.4 Under **Instance details**, select **Locally-redundant storage (LRS)** for **Redundancy**

Instance details

Storage account name ⓘ *

Region ⓘ *

[Deploy to an edge zone](#)

Performance ⓘ *

☒ **Standard:** Recommended for most scenarios (general-purpose v2 account)

☐ **Premium:** Recommended for scenarios that require low latency.

Redundancy ⓘ *

1.5 In the **Advanced** tab, go to the **Hierarchical Namespace** section and check the **Enable hierarchical namespace** box

Microsoft Azure Search resources, services, and docs (G+/I)

Home > Storage accounts >

Create a storage account ...

Basics **Advanced** Networking Data protection Encryption Tags Review

Hierarchical Namespace

Hierarchical namespace, complemented by Data Lake Storage Gen2 endpoint, enables file and directory semantics, accelerates big data analytics workloads, and enables access control lists (ACLs) [Learn more](#)

Enable hierarchical namespace ☒

Access protocols

Blob and Data Lake Gen2 endpoints are provisioned by default [Learn more](#)

Enable SFTP ⓘ ☐

Enable network file system v3 ⓘ ☐

[Review](#) [< Previous](#) [Next : Networking >](#) [Give feedback](#)

1.6 Click **Review** and then **Create**

Basics Advanced Networking Data protection Encryption Tags **Review**

Basics

Subscription	Simplilearn HOL 100487
Resource Group	MyResourceGroup
Location	eastus
Storage account name	mystorageaccount0102
Deployment model	Resource manager
Performance	Standard
Replication	Locally-redundant storage (LRS)

Advanced

Enable hierarchical namespace	Enabled
Enable network file system v3	Disabled

Create < Previous Next > Download a template for automation Give feedback

The storage account has been created successfully as shown in the screenshot:

Step 2: Manage blob storage

2.1 Navigate to the **Storage accounts** page and select the newly created storage account

2.2 In the left menu, scroll to **Data storage** and select **Containers**

2.3 Click **+ Container** to create a new container

2.4 Fill in the necessary details and click **Create**

2.5 Click on the newly created container (**mynewcontainer**)

2.6 On the **mynewcontainer** page, click **Upload**

2.7 Browse your local file system to upload a file as a block blob, and click **Upload**

The blob has been uploaded successfully as shown below:

2.8 Click **Advanced** to view the advanced settings

Step 3: Create and configure Azure file share

3.1 Open the created storage account and select **File shares** under **Data storage**

3.2 Click **+ File share** to create a new file share

3.3 On the **New file share** page, navigate to the **Basics** tab, provide details as shown below, and click **Review + create**

Microsoft Azure

Search resources, services, and docs (G+)

Home > Storage accounts > mystorageaccount0102 | File shares >

New file share

Basics Backup Review + create

Name * mynewfileshare

Tier * Transaction optimized

Performance

Maximum IO/s 1000

Maximum capacity 5 TiB

Large file shares Disabled

You can improve performance and maximum share capacity by enabling large file shares for this storage account. [Learn more](#)

Protocol SMB

Backup

Vault name (new) vault-lncuit00

Backup policy (new) DailyPolicy-lncuit8d

Policy details

Backup frequency Daily at 7:30 PM UTC

Retention of daily backup point Retain backup taken every day at 7:30 PM for 30 Day(s)

Create < Previous Next > Download a template for automation

Give feedback

The new file share has been successfully created as shown below:

Step 4: Manage network access for Azure storage

4.1 Open the newly created storage account and select **Networking** under **Security + networking**

4.2 On the **Firewalls and virtual networks** tab, under **Public network access**, select **Enable from all networks** and click **Save**

The firewall and virtual network settings are successfully updated as shown in the screenshot:

By following the above steps, you have successfully managed Azure storage, ensuring that the data is secure and properly maintained within Microsoft's cloud storage services.
