

Lesson 11 Demo 01

Creating a Virtual Machine

Objective: To create a virtual machine to deploy and run applications, host websites, process data, or manage diverse workloads

Tools required: Azure account with administrator access

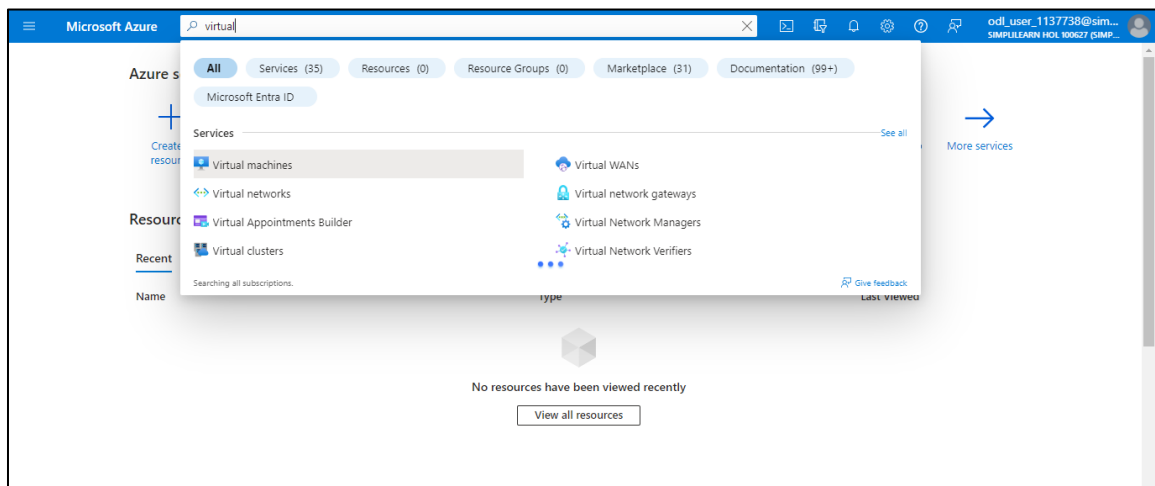

Prerequisites: None

Steps to be followed:

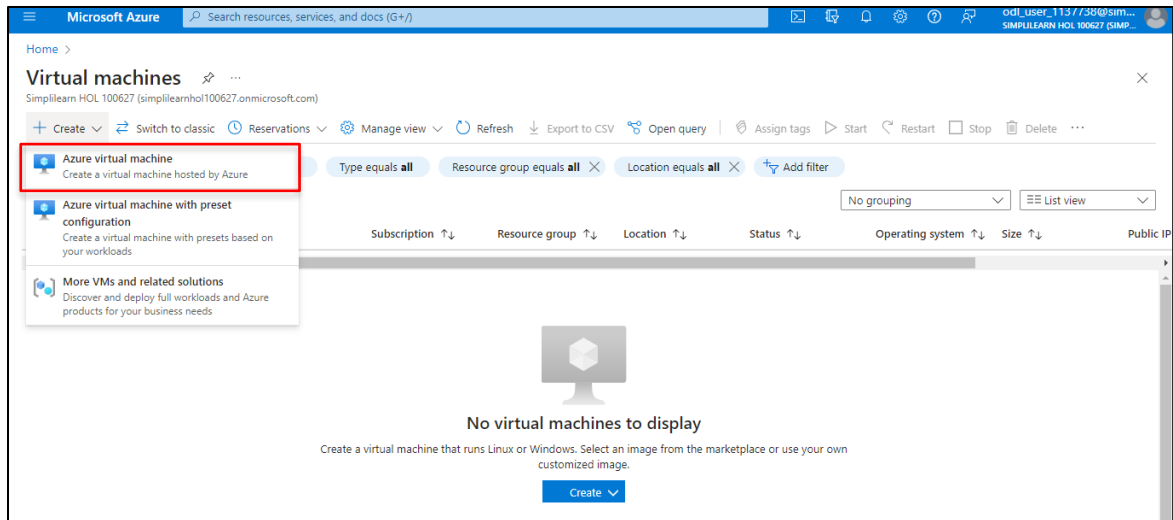

1. Create a virtual machine

Step 1: Create a virtual machine

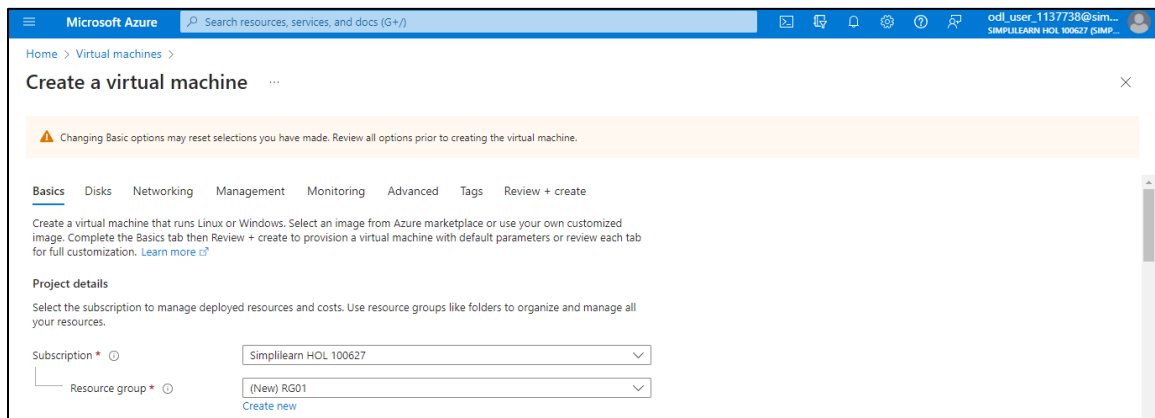

- 1.1 Log in to the Azure portal; search for and select **Virtual machines**

1.2 In the **Virtual machines** page, click on **+ Create** and select **Azure virtual machine**

1.3 In the **Create a virtual machine** page, navigate to the **Basics** tab. Under **Project details**, select the **Subscription**, and then choose a **Resource group** or click on **Create new** to create a new resource group.

1.4 Under **Instance details**, enter the details as shown in the screenshot below:

The screenshot shows the 'Create a virtual machine' page in the Microsoft Azure portal. The 'Instance details' section is active, showing the following configuration:

- Virtual machine name:** vmdemo
- Region:** (US) East US
- Availability options:** Availability zone
- Availability zone:** Zones 1
- Security type:** Standard
- Image:** Windows Server 2019 Datacenter - x64 Gen2

At the bottom of the section, there are two informational messages: one about selecting multiple zones and another about the image's compatibility with additional security features. Navigation buttons at the bottom include 'Review + create', '< Previous', and 'Next: Disks >'. A 'Give feedback' link is also present in the bottom right corner.

1.5 Under **Administrator account** and **Inbound port rules**, enter the information as shown in the screenshot below and click on **Review + create**:

The screenshot shows the 'Create a virtual machine' page in the Microsoft Azure portal, specifically the 'Administrator account' and 'Inbound port rules' sections.

Administrator account:

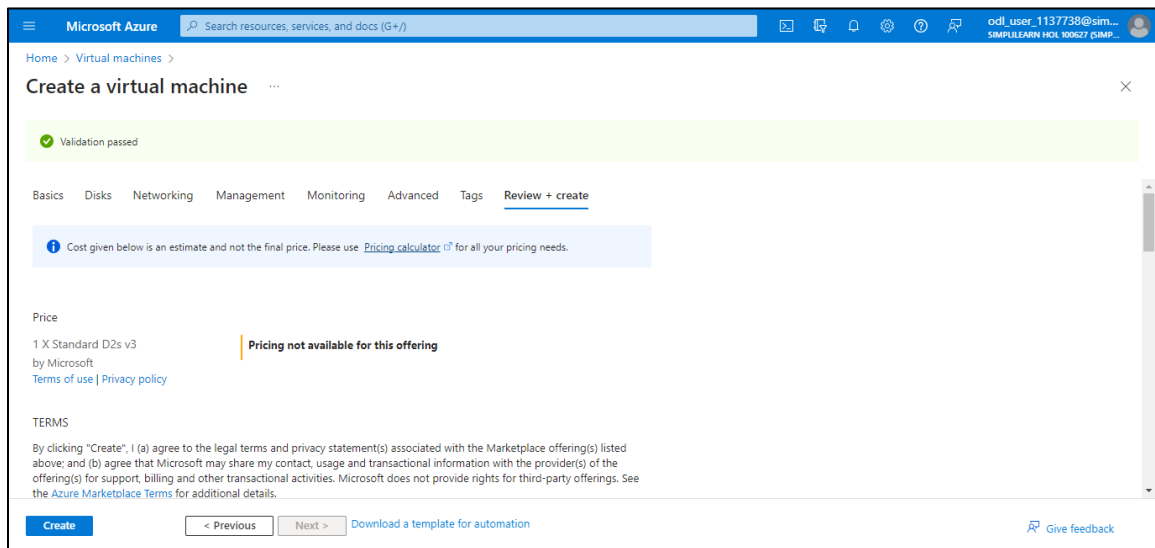

- Username:** azureuser
- Password:** [Redacted]
- Confirm password:** [Redacted]

Inbound port rules:

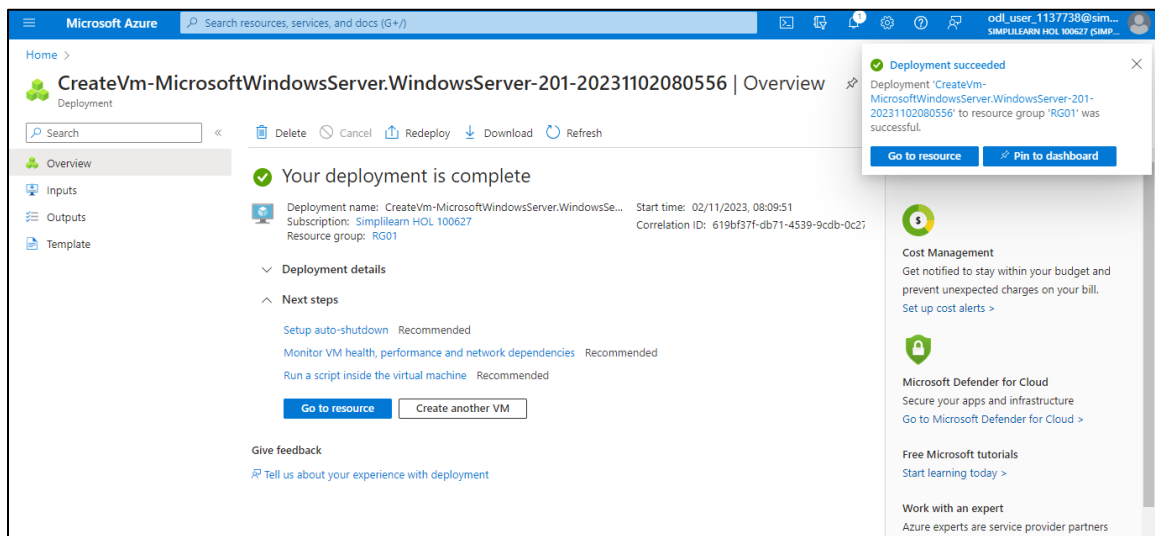

- Public inbound ports:** ☒ Allow selected ports
- Select inbound ports:** HTTP (80), RDP (3389)

At the bottom of the page, there are navigation buttons: 'Review + create', '< Previous', and 'Next: Disks >'. A 'Give feedback' link is also present in the bottom right corner.

1.6 After the validation passes, click on **Create**

Your virtual machine deployment has succeeded as shown in the screenshot below:

By following these steps, you have successfully created a virtual machine to deploy and run applications, host websites, process data, or support various workloads in the Azure cloud environment.
