

Lesson 11 Demo 04

Creating a Container Registry

Objective: To create a container registry for secure storage and efficient management of container images

Tools required: Azure account with administrator access

Prerequisites: None

Steps to be followed:

1. Create a container registry

Step 1: Create a container registry

- 1.1 Log in to the Azure portal and click on + Create a resource

1.2 Search for and select **Container Registry**

1.3 In the **Container Registry** page, click on **Create**

1.4 In the **Create container registry** page, navigate to the **Basics** tab, and enter the information as shown in the screenshots below. Then, click on **Review + create**.

Microsoft Azure Search resources, services, and docs (G+)

Home > Create a resource > Marketplace > Container Registry >

Create container registry

Basics Networking Encryption Tags Review + create

Azure Container Registry allows you to build, store, and manage container images and artifacts in a private registry for all types of container deployments. Use Azure container registries with your existing container development and deployment pipelines. Use Azure Container Registry Tasks to build container images in Azure on-demand, or automate builds triggered by source code updates, updates to a container's base image, or timers. [Learn more](#)

The container registry is deployed as shown in the screenshot below:

By following these steps, you have successfully deployed the container registry to securely store and manage container images for streamlined deployment and orchestration within your Azure environment.
