

Lesson 12 Demo 02

Downloading ARM Template

Objective: To download an ARM template for provisioning a Microsoft Azure virtual machine with the specified configurations and resources

Tools Required: Azure account with administrator access

Prerequisites: None

Steps to be followed:

1. Download the ARM template

Step 1: Download the ARM template

- 1.1 Log in to the Azure portal and click on + **Create a resource** button

1.2 Search for **Virtual machine** and click on **Create** as shown in the screenshot below:

1.3 In the **Basics** tab, click on **Create new**

1.4 In the **Name** field, enter the resource group name and click on the **OK** button

Microsoft Azure Search resources, services, and docs (G+)

Home > Create a resource >

Create a virtual machine ...

Basics Disks Networking Management Monitoring Advanced Tags Review + create

Create a virtual machine that runs Linux or Windows. Select an image from Azure marketplace or use your own customized image. Complete the Basics tab then Review + create to provision a virtual machine with default parameters or review each tab for full customization. [Learn more](#)

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Azure VMs have one operating system disk and a temporary disk for short-term storage. You can attach additional data disks. The size of the VM determines the type of storage you can use and the number of data disks allowed. [Learn more](#)

VM disk encryption

Azure disk storage encryption automatically encrypts your data stored on Azure managed disks (OS and data disks) at rest by default when persisting it to the cloud.

Encryption at host ☐

Encryption at host is not registered for the selected subscription. [Learn more about enabling this feature](#)

OS disk

OS disk size

OS disk type *

The selected VM size supports premium disks. We recommend Premium SSD for high IOPS workloads. Virtual machines with Premium SSD disks qualify for the 99.9% connectivity SLA.

Delete with VM ☒

Key management

Enable Ultra Disk compatibility ☐

Data disks for DemoVM5

You can add and configure additional data disks for your virtual machine or attach existing disks. This VM also comes with a temporary disk.

Terms

[Azure Marketplace Terms](#) | [Azure Marketplace](#)

By clicking "Create," I (a) agree to the applicable legal terms associated with the offering; (b) authorize Microsoft to charge or bill my current payment method for the fees associated the offering(s), including applicable taxes, with the same billing frequency as my Azure subscription, until I discontinue use of the offering(s); and (c) agree that, if the deployment involves 3rd party offerings, Microsoft may share my contact information and other details of such deployment with the publisher of that offering.

Microsoft assumes no responsibility for any actions performed by third-party templates and does not provide rights for third-party products or services. See the [Azure Marketplace Terms](#) for additional terms.

Deploying this template will create one or more Azure resources or Marketplace offerings. You acknowledge that you are responsible for reviewing the applicable pricing and legal terms associated with all resources and offerings deployed as part of this template. Prices and associated legal terms for any Marketplace offerings can be found in the [Azure Marketplace](#); both are subject to change at any time prior to deployment.

Neither subscription credits nor monetary commitment funds may be used to purchase non-Microsoft offerings. These purchases are billed separately.

If any Microsoft products are included in a Marketplace offering (e.g. Windows Server or SQL Server), such products are licensed by Microsoft and not by any third party.

After successful deployment, the following screen will appear:

Note: Using both the template file and the parameters file, you can create a resource. In this tutorial, the Azure Virtual Machine creation is successful as shown in the screenshot below:

By following these steps, you have successfully imported the custom ARM template into the virtual machine for provisioning a Microsoft Azure virtual machine with the specified configurations and resources.
