

Lesson 15 Demo 02

Creating Azure Billing Alerts

Objective: To view Azure billing alerts to notify users about their usage and costs

Tools Required: Azure account with administrator access

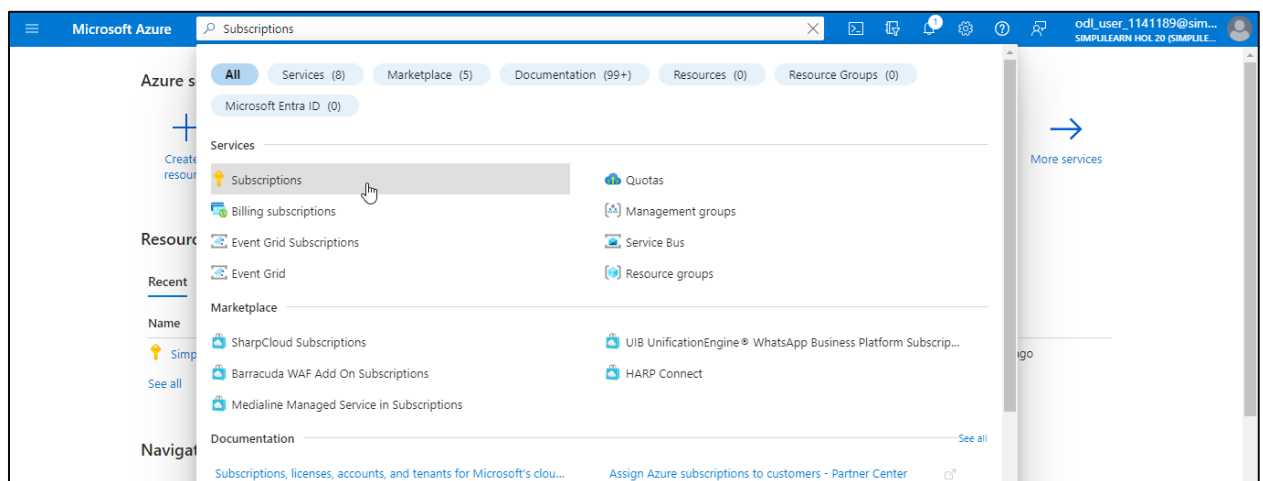

Prerequisites: A scope on the Azure portal to check the billing alerts

Steps to be followed:

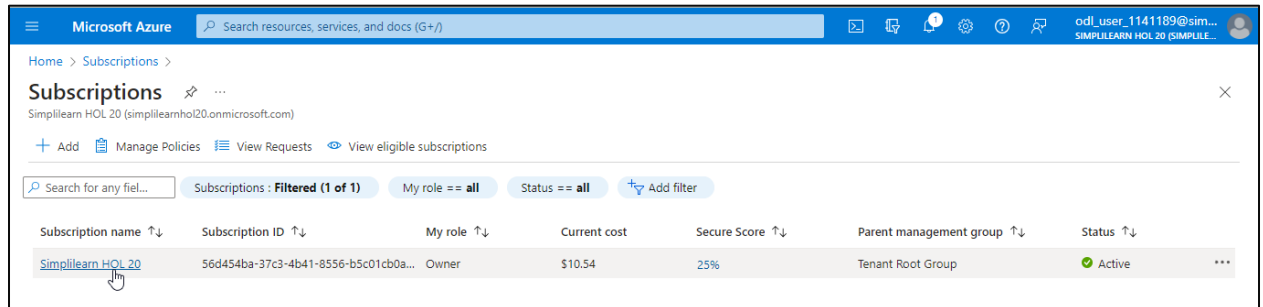

1. Create Azure billing alerts

Step 1: Create Azure billing alerts

- 1.1 Log in to the Azure portal, search for **Subscriptions**, and select it

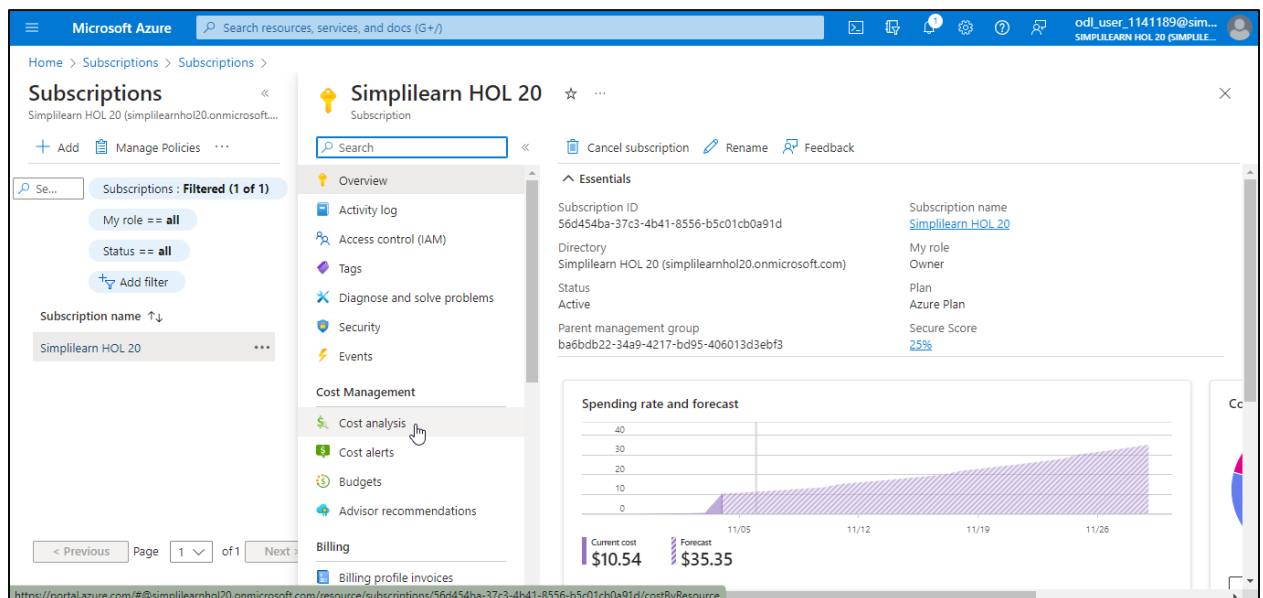

1.2 In the **Subscriptions** page, open the desired scope for which you want to create a billing alert by selecting a subscription from the **Subscription name** list

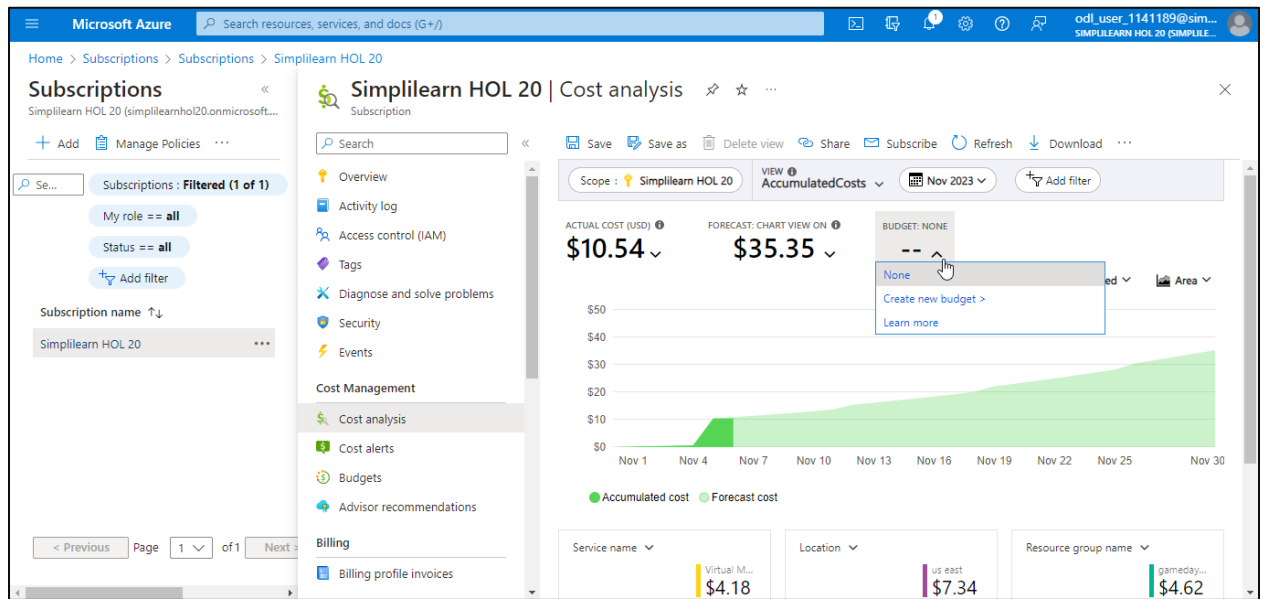

Note: You will not see **Switch scope** if you only have access to one scope.

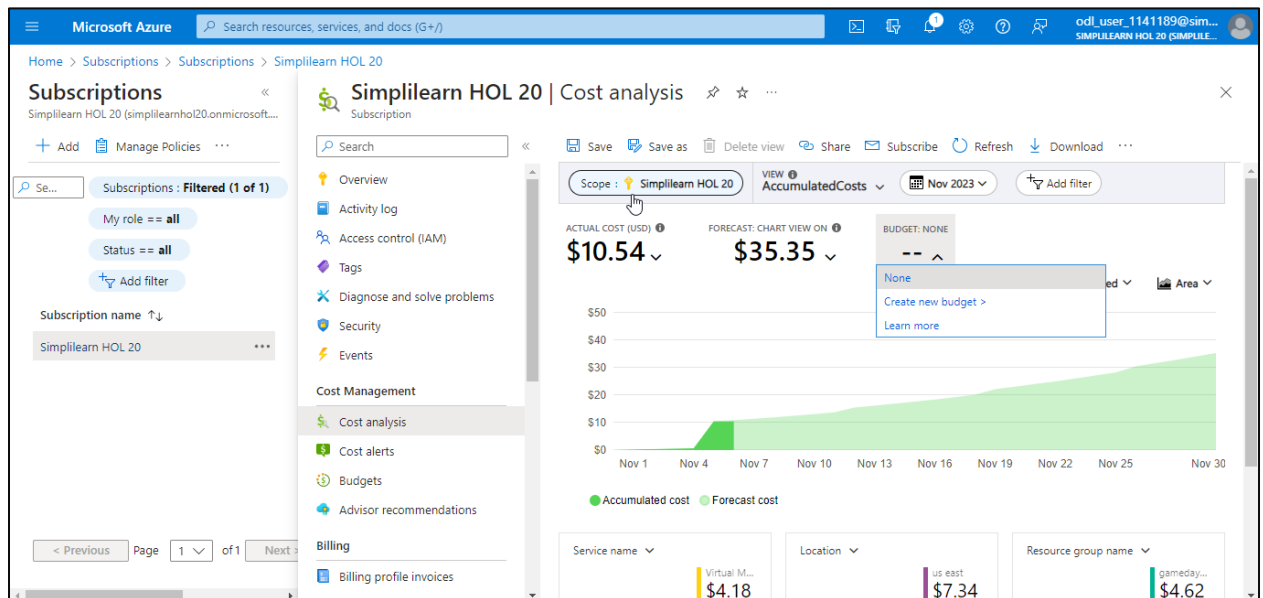

1.3 Under the **Cost Management** section, click on **Cost analysis**

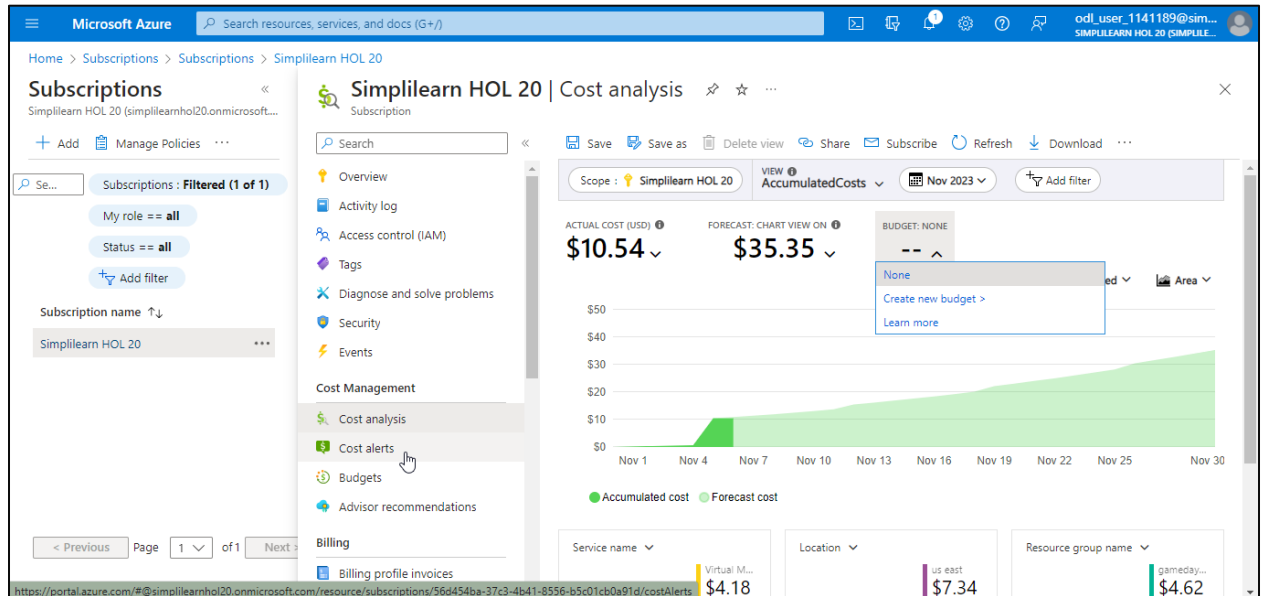

1.4 Click on the dropdown of **BUDGET** to view the budget

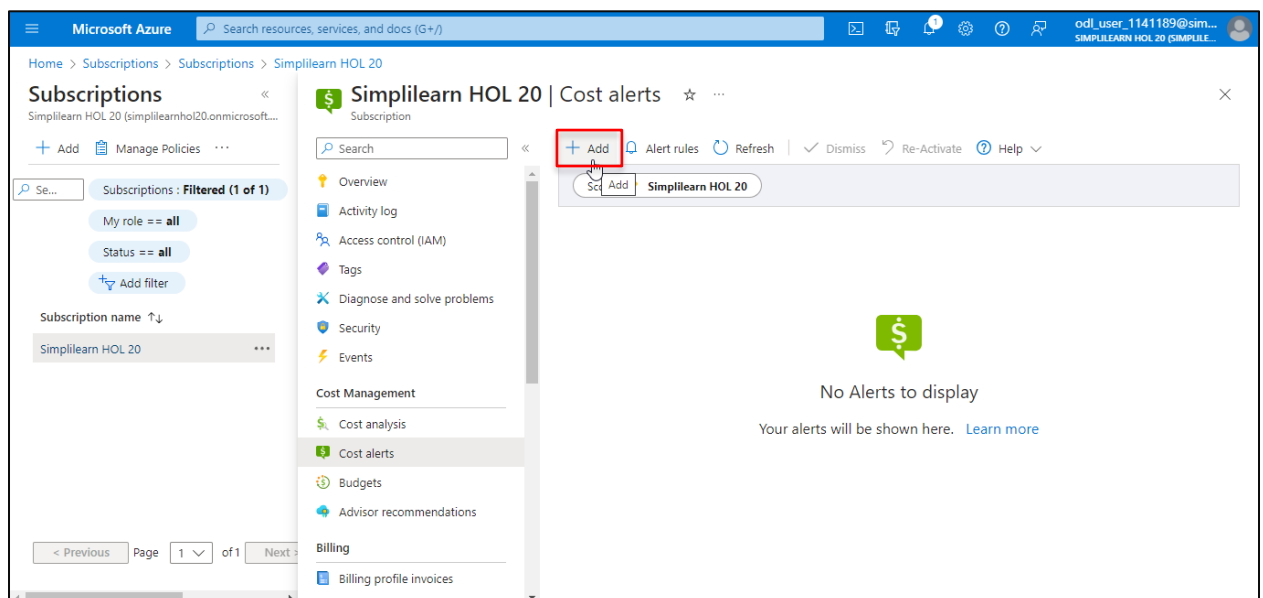

1.5 If required, click on **Scope**: to switch the scope

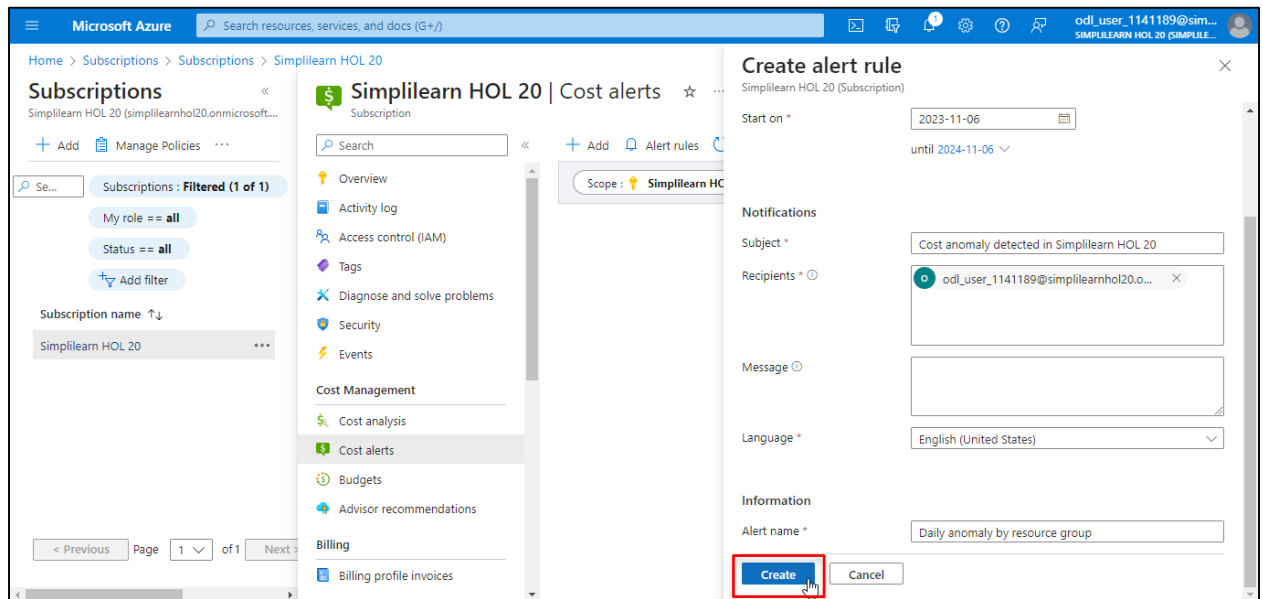

1.6 Under the **Cost Management** tab, click on **Cost alerts** to add or enable billing alerts for the Azure account

1.7 To add **Cost alerts**, click on **+ Add** as shown in the screenshot below:

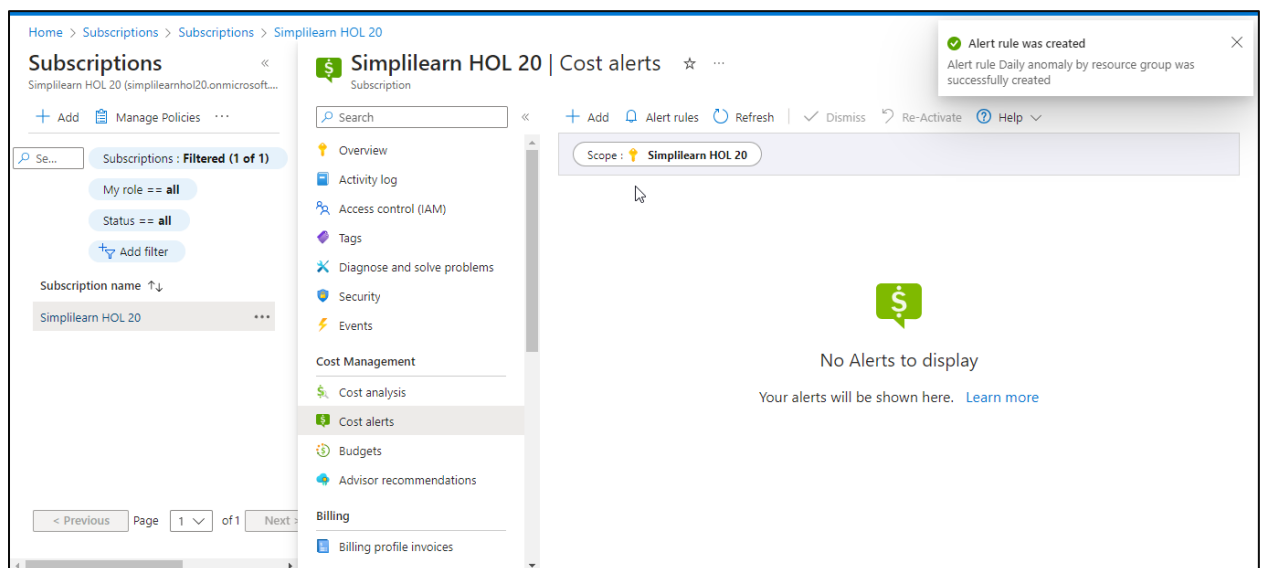

1.8 In the **Create alert rule** page, fill in the required details, and then click on **Create** button

Note: Budget alerts are generated automatically whenever the budget alert conditions are met. An alert email is also sent to the users in the alert recipients list of the budget.

After successful alert creation, the following screen will appear:

By following the above steps, you have successfully viewed and created Azure billing alerts.
