

Lesson-End Project

Designing Solution for Database

Project Agenda: Design a database solution that ensures high availability, scalability, and robust security for a growing e-commerce platform

Description: You have been given a project to move a database from on-premises to the cloud. The data is in a document format. You need to choose the right database option. You also need to ensure that you have support for querying items using the Structured Query Language (SQL) syntax. Suggest a solution for this migration.

Tools required: Azure account with administrator access

Prerequisites: None

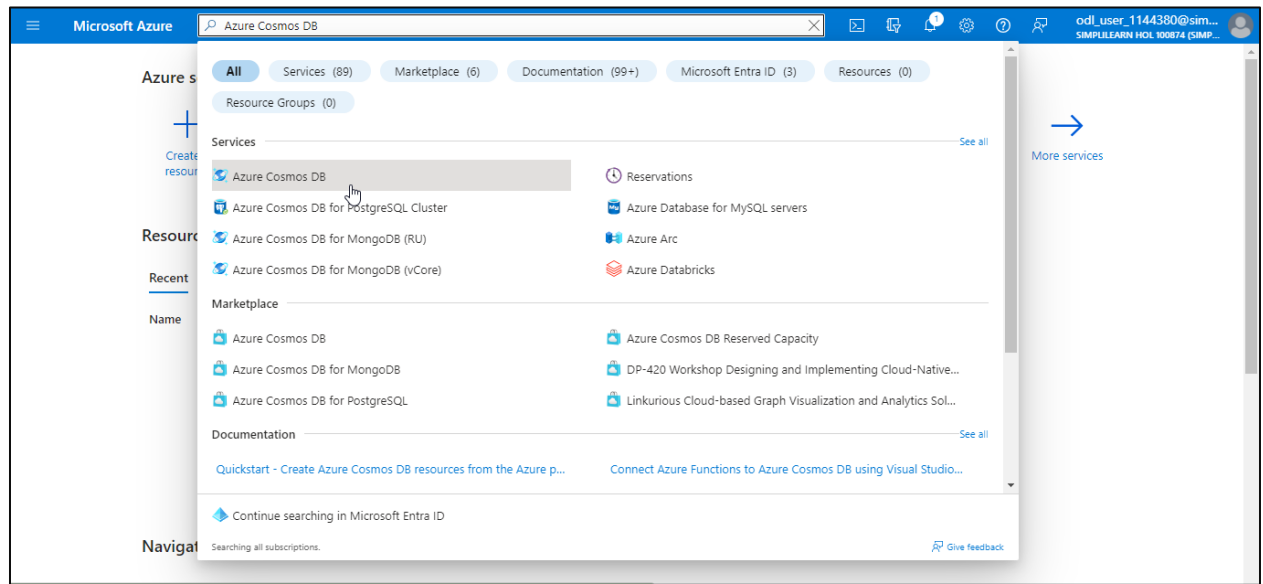

Expected deliverables: Choose a right database solution for the given scenario with the required configuration and add screenshots representing the implementation of the solution

Steps to be followed:

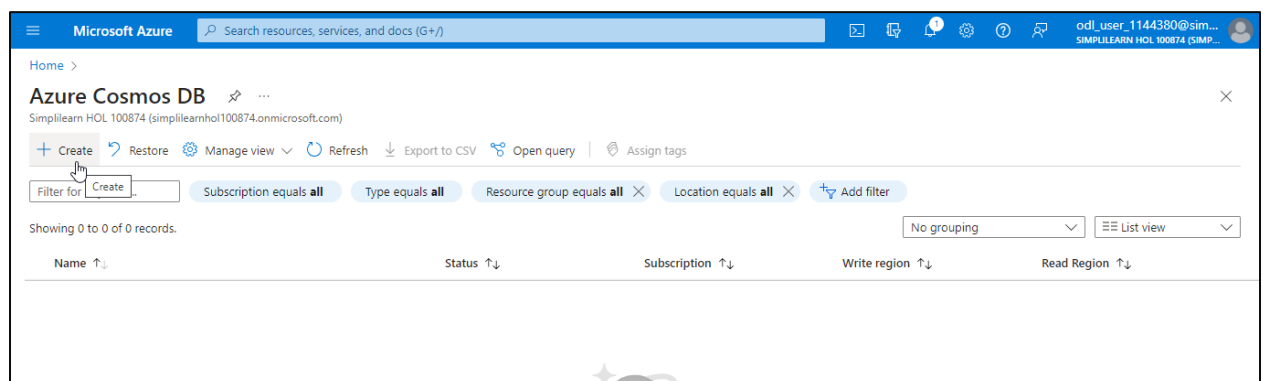

1. Create an Azure Cosmos DB account by selecting Azure Cosmos DB for NoSQL API option

Step 1: Create an Azure Cosmos DB account by selecting Azure Cosmos DB for NoSQL API option

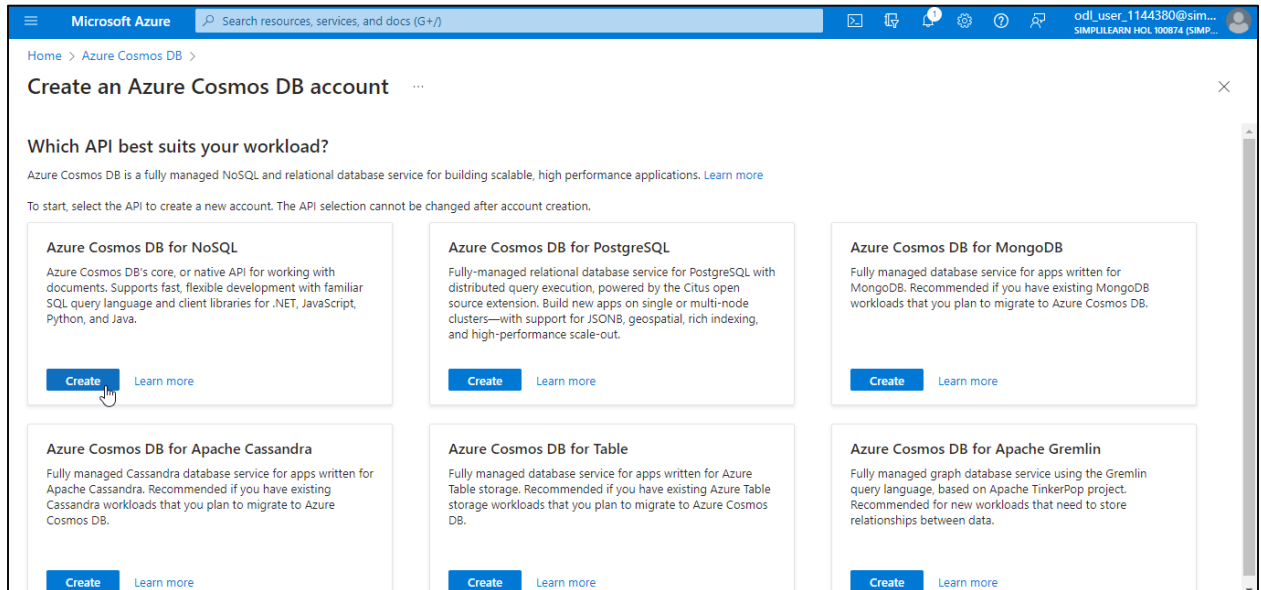

1.1 Log in to the Azure portal; search for and select Azure Cosmos DB

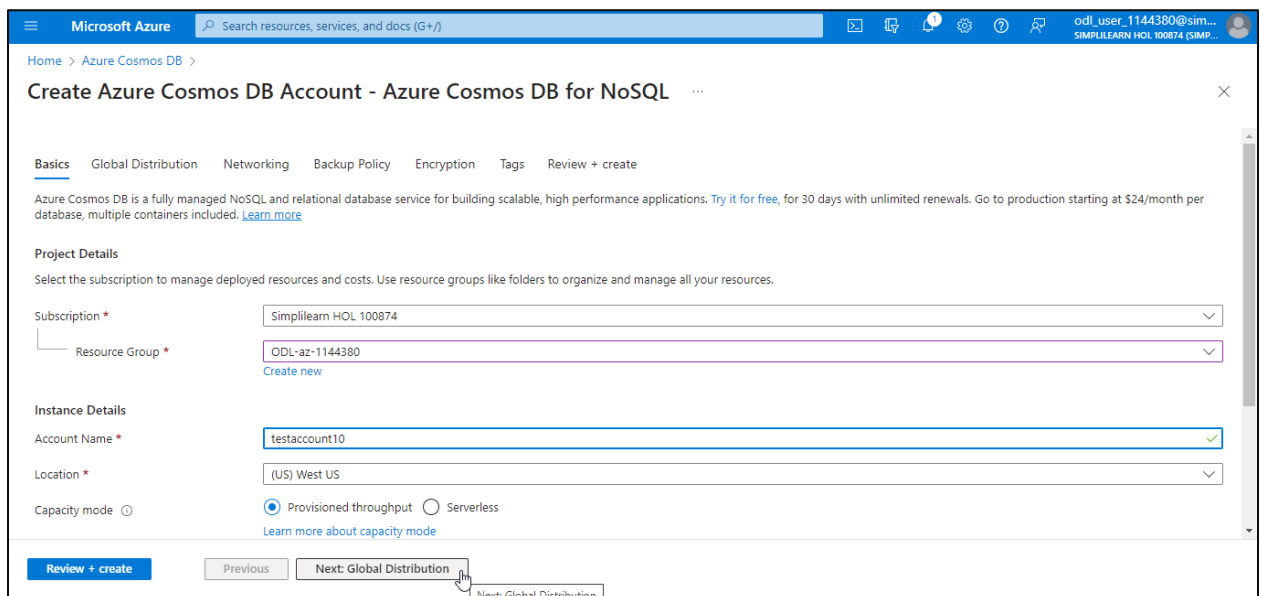

1.2 In the Azure Cosmos DB page, click on the + Create button

1.3 In the **Create an Azure Cosmos DB** page, select **Azure Cosmos DB for NoSQL** and click on **Create**

1.4 In the **Create Azure Cosmos DB Account – Azure Cosmos DB for NoSQL** page, under the **Basics** tab, enter the required details and click on **Next: Global Distribution**

1.5 Select **Enable** for both fields as shown in the screenshot below, then click on **Review + create**

Microsoft Azure Search resources, services, and docs (G+)

Home > Azure Cosmos DB >

Create Azure Cosmos DB Account - Azure Cosmos DB for NoSQL

Basics **Global Distribution** Networking Backup Policy Encryption Tags Review + create

Global Distribution

Configure availability zone settings for your account. You cannot change these settings once the account is created.

Geo-Redundancy ☒ Enable ☐ Disable

Multi-region Writes ☒ Enable ☐ Disable

Review + create Previous Next: Networking

1.6 Click on **Create**
